

COMPANY

Pantostamp is a consolidated reality in the market of injection mold manufacturing, founded in 1976 by **Bernardo Scalici** who after some experiences as an employee toolmaker decides to open his own company producing special parts for tool.

After just a few years, the company sees its growth in the complete production of **plastic injection molds**.

In the last twenty years, Pantostamp has consolidated its core business in the packaging sector, designing and manufacturing multi-cavity molds with a high technical quality content.

Today Pantostamp proposes itself as a supplier-partner supporting the customer throughout the entire production process, from the design to the startup of the tool in production.

MISSION

Our mission is to **design and manufacture molds** with a high technical-quality content. Customer assistance and collaboration during the entire production process are determined in order to achieve the most effective product placement on the market and the quickest response to its expectations.

Pantostamp proposes itself as a supplier - partner, that studies the requirements of the product together with the customer, in order to set the specific constructive characteristics of the mold based on the needs of the customer to find, following the most suitable road, the best quality-price value.

VISION

Experimenting new materials, reducing cycle time and energy consumption are some elements of the policies that Pantostamp proposes to its customers.

Product development is increasingly the result of cooperation upstream of executive activities; the **teams of specialists** and the ability to interact effectively are the fundamental components of success.

SUSTAINABILITY

The development of economies without eco-sustainable planning, not respecting the environment is over. Every company must perceive with extreme clarity the impact of the **Sustainability** topic on its economy and on future development. Every product, every process, every structure or activity must evolve in terms of sustainability, considering the whole life cycle, creating and spreading this new culture.

From the threat to the opportunity with the **green marketing**!

The growing awareness of the consumer on the environmental and energetic risk, is progressively inducing different behaviors in the purchase choices. As with low-energy light bulbs and many other topics, any innovation that promises tangible progress in sustainability is increasingly becoming a preferred choice.

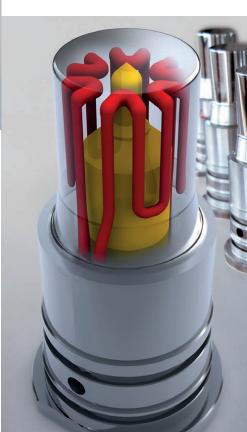

Energy and the environment are driving topics of the business. The belief of Pantostamp on the issues of sustainability and social responsibility of the company has influenced the business strategies in a decisive manner.

DESIGN

A **specialized technical office**, inside our company, equipped with the cutting-edge softwares and always up-to-date, guarantees the accurate design of the mold and of the CAM paths. We consider this a strong point so that the customer can feel in close contact with the Pantostamp designers and establish a relationship of trust and constant collaboration with them throughout the production process.

MANUFACTURING

The use of **the most advanced technologies and systems, together with the use of highly qualified technicians**, guarantees the quality of the result and the speed of execution. A production process studied in detail, consistently planned and constantly monitored.

Thanks to the meticulous inspection on all the components of the mold using CNC measuring machines, we guarantee a high precision work aimed at achieving customer satisfaction and expectations.

SPARE PARTS

Pantostamp with the **spare parts and molds maintenance service**, provides all the necessary support to redesign and build each element to be replaced in the molds with precision and efficiency allowing the customer a quick restart of production and an adequate recovery of the company's competitiveness.

TEST AND SAMPLING

Following **scrupulous checks** after each process and in order to guarantee you an excellent result, after the final assembly a sampling of the mold is made to test and verify its perfect functionality.

If requested by the Customer, Pantostamp offers the possibility of having molding parameters for the production start up as well as customized tests with the Customer's technicians.

PHARMA-SPRAY

Pantostamp works with the pharmaceutical and spray industry with the production of molds for components for pumps and dispensers. This sector requires high precision of realization given to the complexity and the reduced

size of some products. The molds for this sector must also be able to work in highly aseptic environments such as cleanrooms.

Thanks to the continuous research Pantostamp use the most suitable steels and surface coatings so that the molds can be used without the use of greases or lubricants. Pantostamp always supplies the mold with a series of spare parts of the most delicate components, also keeping stock ready for shipment.

COSMETIC

A sector that requires high standards in surface finishing and perfection of the parting lines, functional products with high added value in terms of aesthetics. Thanks to the close collabo-

ration with the customer, Pantostamp, from the design, analyzes the critical issues of the piece proposing the best technical quality solution. The use of cutting-edge technology and always in step with the innovations proposed by the market, the partnership with scrupulously selected suppliers allow the achievement of results certainly up to the expectations of the customer.

BEVERAGE

Pantostamp often works in this market with the construction of molds related to the supply of complete production plants. Thanks to the collaboration with manufacturers of injection machine and assembly machines we are able to follow the customer on all its production line. Another peculiarity that requires this sector and held by us in strong consideration, is the long duration of the molds due to the high work rates, very fast cycles time and the production of millions of pieces.

The molds that Pantostamp builds for this specific market are always equipped with technologically advanced safety systems designed to protect the mold from incorrect operations or process defects.
